

PLUG REMOVAL UNIT

This unit is designed to remove plastic plugs from the ends of electrical heating elements.

The plug removal process is performed by two electro-pneumatic clamps that secure the heating element, and two electro-pneumatic units that remove the plastic caps.

The operational station consists of two automatic units. One unit preheats the ends of the element (which must be of a suitable shape) and the plugs, and the other electro-pneumatic unit, complete with a clamping gripper, removes the plastic plugs.

Mod. 200/00.IA1000 – Plug removal unit with pre-heating

CARATTERISTICHE TECNICHE

Heating element length	: mm	To be defined
Shape of the plug	: draw	To be defined
Diameter of heating element (one diameter)	: mm	6-10
Power supply	: V	To be defined
Pneumatic supply	: Bar	6
Cycle time	: sec.	6-12
Weight	: Kg	160
Installed power	: KVA	4,5
